**Growth is Key:** Investing in your development is our priority. We offer training and programs to hone your skills and cultivate leadership potential.  
**Fairness & Innovation:** Integrity and a focus on innovation guide everything we do, creating a rewarding and inspiring workplace

UNIVA

# Distributing the Future of Skincare

UNIVA Group, a leader in regenerative medicine research and development, translates cutting-edge science into real-world results.

Through UNIVA Skincare, we empower patients, physicians, and skincare professionals with a revolutionary line of products for skin and hair care, using the power of regenerative medicine to deliver accelerated results.

UNIVA allows the power of cutting-edge biotechnology to shine through a unique trifecta of actives including:

1. PDENs (Plant Derived Exosome-like Nanoparticles)
2. Bioengineered Growth Factors
3. Biomimetic Peptides

Driving exceptional results in our transformative formulas.

# UNIVA

SKINCARE

A scientific revolution for your most radiant skin.

## *SYNC : The Latest technology*

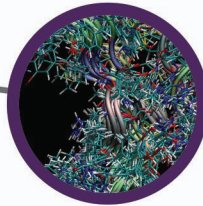

**The outstanding biotechnology behind UNIVA's success lies in three foundational actives, present in nearly all our formulas:**

### **PLANT DERIVED EXOSOME-LIKE NANOPARTICLES (PDENS)**

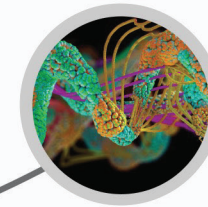

Nanoparticle messenger proteins secreted from botanically sourced stem cells to influence cellular behaviors such as repair, growth, reducing inflammation, increase in collagen and elastin production, hair follicle upregulation, and many other essential functions to skin and hair health.

**UNIVA products contain  
1.5 billion+ PDENS per ml.**

### **BIOENGINEERED GROWTH FACTORS**

Bioengineered Growth Factors with increased stability and bioactivity to assist in regulating many of the body's processes including wound healing, fibroblast proliferation, extracellular matrix protein synthesis, blood vessel formation for cell nourishment and hair follicle health, among additional regenerative purposes.

### **BIOMIMETIC PEPTIDES**

Bioidentical compounds that can interact with the body's own growth factor receptors to boost clinical efficacy of skin and hair treatments. Targets of these specialized peptides include anti-aging, anti-inflammatory, anti-hair loss, pigment correction, skin barrier protection, and much more, all expertly designed to imitate the body's natural signalling system.

# Devoté?

It's not just our name, it's our obsession
